# SAFETY INFORMATION

**This service manual is intended for qualified service technicians ; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual. Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.**

## WARNING

**This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.**

**Health & Safety Code Section 25249.6 - Proposition 65**

## NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols  (fast operating fuse) and/or  (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

## REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

Les symboles de fusible  (fusible de type rapide) et/ou  (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

## SAFETY PRECAUTIONS

**NOTICE :** Comply with all cautions and safety related notes located on or inside the cabinet and on the chassis.

The following precautions should be observed :

1. When service is required, even though the PDP UNIT an isolation transformer should be inserted between the power line and the set in safety before any service is performed.
2. When replacing a chassis in the set, all the protective devices must be put back in place, such as barriers, nonmetallic knobs, adjustment and compartment covershields, isolation resistor-capacitor, etc.
3. When service is required, observe the original lead dress. Extra precaution should be taken to assure correct lead dress in the high voltage circuitry area.
4. Always use the manufacture's replacement components. Especially critical components as indicated on the circuit diagram should not be replaced by other manufacture's. Furthermore where a short circuit has occurred, replace those components that indicate evidence of overheating.
5. Before returning a serviced set to the customer, the service technician must thoroughly test the unit to be certain that it is completely safe to operate without danger of electrical shock, and be sure that no protective device built into the set by the manufacture has become defective, or inadvertently defeated during servicing. Therefore, the following checks should be performed for the continued protection of the customer and servicetechnician.

6. Perform the following precautions against unwanted radiation and rise in internal temperature.

- Always return the internal wiring to the original styling.
  - Attach parts (Gasket, Ferrite Core, Ground, Rear Cover, Shield Case etc.) surely after disassembly.
7. Perform the following precautions for the PDP panel.
- When the front case is removed, make sure nothing hits the panel face, panel corner, and panel edge (so that the glass does not break).
  - Make sure that the panel vent does not break. (Check that the cover is attached.)
  - Handle the FPC connected to the panel carefully. Twisting or pulling the FPC when connecting it to the connector will cause it to peel off from the panel.
8. Pay attention to the following.
- When the front case is removed, infrared ray is radiated and may disturb reception of the remote control unit.
  - Pay extreme caution when the front case and rear panel are removed because this may cause a high risk of disturbance to TVs and radios in the surrounding.

## Leakage Current Cold Check

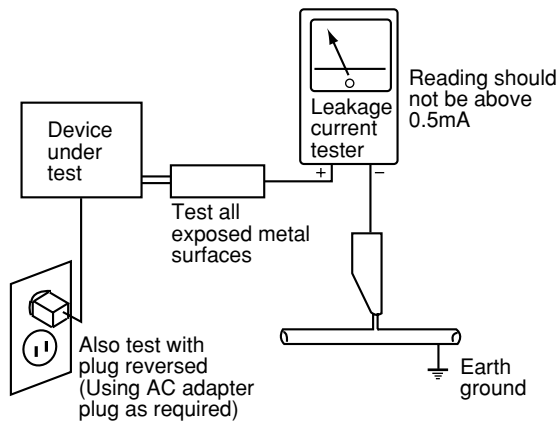

With the AC plug removed from an AC power source, place a jumper across the two plug prongs. Turn the AC power switch on. Using an insulation tester (DC 500V), connect one lead to the jumpered AC plug and touch the other lead to each exposed metal part (input/output terminals, screwheads, metal overlays, control shafts, etc.), particularly any exposed metal part having a return path to the chassis. Exposed metal parts having a return path to the chassis should have a minimum resistor reading of  $0.3M\Omega$  and a maximum resistor reading of  $5M\Omega$ . Any resistor value below or above this range indicates an abnormality which requires corrective action. Exposed metal parts not having a return path to the chassis will indicate an open circuit.

## Leakage Current Hot Check

Plug the AC line cord directly into an AC power source (do not use an isolation transformer for this check).

Turn the AC power switch on.

Using a "Leakage Current Tester (Simpson Model 229 equivalent)", measure for current from all exposed metal parts of the cabinet (input/output terminals, screwheads, metal overlays, control shaft, etc.), particularly any exposed metal part having a return path to the chassis, to a known earth ground (water pipe, conduit, etc.). Any current measured must not exceed  $0.5mA$ .

AC Leakage Test

**ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE SET TO THE CUSTOMER.**

## PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in PIONEER set have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a  $\triangle$  on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

## CAUTION

- **Observe the caution matter, without fail**

- The caution matters of  CAUTION given in the instruction manuals, etc., must be observed, without fail.

- **Do not give shocks and vibration.**

- The panel surface (display plane) of the filter and the PDP module is made of glass. If any shocks or vibration is applied, it may be broken and the scattered glass chips will be a cause of injury.

- **Do not put anything.**

- Do not put anything on the product. Otherwise, this can be a cause of injury as a result of falling down or dropping caused by imbalance.

- **Transportation must be done by enough personnel.**

- The product is heavy. In the case of transportation, unpacking, or packing, more than two persons should do it (four persons for a product of 50-inch or larger) by supporting the top and the bottom of the product.

### ■Miscellaneous caution matters

- (1) This product uses highly integrated semiconductor parts. Since these parts are fragile to electrostatic charges, earth bands should be used for handling. The product should be handled where measures have been taken against electrostatic charges.
- (2) For this product, the PDP modules and the PWBs are repaired by replacement in a unit. Therefore, the units of the PDP modules and the PWBs must not be repaired or disassembled. Otherwise, the validity of warranty will be lost.
- (3) If this product is used for the fixed character display or the like as in the case of a character display board, a phenomenon of burning (not warranted) will occur. Burning is a phenomenon that the unevenness in the brightness is caused in the display. In such a case, the brightness in the section where the integrated display time is longer becomes lower than the brightness in another section where the integrated display time is shorter. This phenomenon is in proportion to the integrated display time and the brightness. For this reason, to relieve this difficulty during servicing, do not use any still picture, but use a display by motion pictures of a video or the like. In addition, use "FULL" for the screen mode and avoid using any display by "NORMAL", "TRUE", or MULTI SCREEN like side by side etc. If it is necessary to use only a still picture for unavoidable reasons, use a burning relief function such as "PLE LOCK", "ORBITER", "SCREEN WIPER", etc.
- (4) When a PDP module is operated after a long time of storage, it may encounter a difficulty like a failure in displaying a screen or unstability according to the condition of storage. In such a case, the PDP module should be incorporated in the product and aging treatment should be carried out for about two hours (all screen display).
- (5) Sulfides will deteriorate the PDP module and this is a cause of malfunction. Therefore, it is absolutely prohibited to put any vulcanized rubber or a material containing sulfur in the vicinity of the PDP module.
- (6) When taking out a PDP module from the maintenance package box, do it slowly so that the

panel surface does not get any shock or stress.

- (7) If one touches the connector of the flexible cable exposed to the rear side of the PDP module, there is danger of causing a poor contact. As such, it must be handled with utmost care. In addition, the flexible cable is very weak in mechanical strength. Therefore, this cable must not be touched during handling.
- (8) The panel surface of the filter and the PDP module is easy to be hurt. These components should be handled very carefully not to press or rub them with a hard thing. Never put them on a hard thing with the panel surface faced downwards.
- (9) When the panel surface of the PDP module is contaminated, gently wipe off the contaminant with a piece of soft dry cloth. Liquid-state contamination can be removed by lightly pressing it, without rubbing it. If it is difficult to remove the contamination, use a piece of cloth soaked with a neutral detergent. The cloth for wiping off should be clean. Never use the same cloth repeatedly. If a cleansing detergent or water drops should enter the module interior or be attached to the module surface other than the display plane at the time of cleaning, this will give rise to the destruction of the product when the product is energized.
- (10) Refer to the "Instruction Manual" in regard to contamination in the filter and the cabinet.
- (11) When transporting this product, use the packing materials specified in the list of parts. Once used, such packing materials should not be used again.
- (12) This product is composed of a variety of parts, such as those made of materials like glass, metal, plastics, etc., and those like a lithium battery (circuit symbol of the MAIN PWB: BA9501), etc. Therefore, when abandoning this product, this should be done in accordance with the relevant law of the nation or an autonomous body.

CAUTION: Risk of Explosion if Battery is replaced by an Incorrect Type. Dispose of Used Batteries According to above the Instructions.

## [Important Check Points for Good Servicing]

In this manual, procedures that must be performed during repairs are marked with the below symbol.  
Please be sure to confirm and follow these procedures.

### 1. Product safety

Please conform to product regulations (such as safety and radiation regulations), and maintain a safe servicing environment by following the safety instructions described in this manual.

- ① Use specified parts for repair.

Use genuine parts. Be sure to use important parts for safety.

- ② Do not perform modifications without proper instructions.

Please follow the specified safety methods when modification(addition/change of parts) is required due to interferences such as radio/TV interference and foreign noise.

- ③ Make sure the soldering of repaired locations is properly performed.

When you solder while repairing, please be sure that there are no cold solder and other debris.  
Soldering should be finished with the proper quantity. (Refer to the example)

- ④ Make sure the screws are tightly fastened.

Please be sure that all screws are fastened, and that there are no loose screws.

- ⑤ Make sure each connectors are correctly inserted.

Please be sure that all connectors are inserted, and that there are no imperfect insertion.

- ⑥ Make sure the wiring cables are set to their original state.

Please replace the wiring and cables to the original state after repairs.  
In addition, be sure that there are no pinched wires, etc.

- ⑦ Make sure screws and soldering scraps do not remain inside the product.

Please check that neither solder debris nor screws remain inside the product.

- ⑧ There should be no semi-broken wires, scratches, melting, etc. on the coating of the power cord.

Damaged power cords may lead to fire accidents, so please be sure that there are no damages.  
If you find a damaged power cord, please exchange it with a suitable one.

- ⑨ There should be no spark traces or similar marks on the power plug.

When spark traces or similar marks are found on the power supply plug, please check the connection and advise on secure connections and suitable usage. Please exchange the power cord if necessary.

- ⑩ Safe environment should be secured during servicing.

When you perform repairs, please pay attention to static electricity, furniture, household articles, etc. in order to prevent injuries.  
Please pay attention to your surroundings and repair safely.

### 2. Adjustments

To keep the original performance of the products, optimum adjustments and confirmation of characteristics within specification.  
Adjustments should be performed in accordance with the procedures/instructions described in this manual.

### 3. Lubricants, Glues, and Replacement parts

Use grease and adhesives that are equal to the specified substance.  
Make sure the proper amount is applied.

### 4. Cleaning

For parts that require cleaning, such as optical pickups, tape deck heads, lenses and mirrors used in projection monitors, proper cleaning should be performed to restore their performances.

### 5. Shipping mode and Shipping screws

To protect products from damages or failures during transit, the shipping mode should be set or the shipping screws should be installed before shipment. Please be sure to follow this method especially if it is specified in this manual.

- 
- \*1 Only when using a graphic accelerator board that is capable of displaying 852 480.
  - \*2 Display only 400 lines with the screen center of the vertical orientation located at the center.
  - \*3 The picture is displayed in the original resolution. The picture will be compressed for other signals.
  - \*4 Aspect ratio is 5:4. This signal is converted to a 600 dots 480 lines signal.
  - \*5 Normally the RGB select mode suite for the input signals is set automatically. If the picture is not displayed properly, set the RGB mode prepared for the input signals listed in the table above.
  - \*6 To connect the monitor to Macintosh computer, use the monitor adapter (D-Sub 15-pin) to your computer's video port.
  - \*7 Other screen modes (ZOOM and WIDE) are available as well.
  - \*8 When viewing a moving picture at a vertical frequency greater than 65Hz, the picture may sometimes be unstable (jumpy). If this occurs, please set the refresh rate of the external equipment to 60Hz.  
To view 480I@60Hz (480 interlaced lines, 60Hz refresh rate) or 576I@50Hz (576 interlaced lines, 50Hz refresh rate) when sync polarity is "Sync on Green", set "RGB SELECT" to "MOTION".
  - \*9 CVT standard compliant.

---

**NOTE:**

- While the input signals comply with the resolution listed in the table above, you may have to adjust the position and size of the picture or the fine picture because of errors in synchronization of your computer.
  - This monitor has a resolution of 853 dots 480 lines. It is recommended that the input signal should be VGA, wide VGA, or equivalent.
  - With digital input some signals are not accepted.
  - The sync may be disturbed when a nonstandard signal other than the aforementioned is input.
  - If you are connecting a composite sync signal, use the HD terminal.
- 

What is HDCP/HDCP technology?

HDCP is an acronym for High-bandwidth Digital Content Protection. High bandwidth Digital Content Protection (HDCP) is a system for preventing illegal copying of video data sent over a Digital Visual Interface (DVI).

If you are unable to view material via the DVI input, this does not necessarily mean the PDP is not functioning properly. With the implementation of HDCP, there may be cases in which certain content is protected with HDCP and might not be displayed due to the decision/intention of the HDCP community (Digital Content Protection, LLC).

  - "Apple Macintosh" is a registered trademark of Apple Computer, Inc. of the United States.

## ■ PDP-42MVE1/LDFK & /TXGB

### Supported resolution

- When the screen mode is NORMAL, each signal is converted to a 640 dots 480 lines signal. (Except for \*2, \*4)
- When the screen mode is FULL, each signal is converted to a 853 dots 480 lines signal. (Except for \*3)

# PANEL FACILITIES

## ■ PDP-424MV

### Front View

- ① **Power (  )**  
Turns the monitor's power on and off.
- ② **Remote sensor window**  
Receives the signals from the remote control.
- ③ **STANDBY/ON indicator**  
When the power is on ..... Lights green.  
When the power is in the standby mode ... Lights red.
- ④ **INPUT/EXIT**  
Switches the input.  
The available inputs depend on the setting of "BNC INPUT", "RGB SELECT" and "DVI SET-UP".  
Functions as the EXIT buttons in the On-Screen Display (OSD) mode.
- ⑤ **LEFT/- and RIGHT/+**  
Functions as the CURSOR (◀ / ▶) buttons in the On-Screen Display (OSD) mode.
- ⑥ **VOLUME ∨ and ∧**  
Adjusts the volume. Functions as the CURSOR (▲ / ▼) buttons in the On-Screen Display (OSD) mode.
- ⑦ **MENU/SET**  
Sets the On-Screen Display (OSD) mode and displays the main menu.

#### **WARNING**

The Power on/off switch does not disconnect the plasma display completely from the supply mains.

## Rear View/Terminal Board

### **A AC IN**

Connect the included power cord here.

### **B EXT SPEAKER L and R**

Connect speakers (optional) here. Maintain the correct polarity. Connect the  $\oplus$  (positive) speaker wire to the  $\oplus$  EXT SPEAKER terminal and the  $\ominus$  (negative) speaker wire to the  $\ominus$  EXT SPEAKER terminal on both LEFT and RIGHT channels.

Please refer to your speaker's owner's manual.

### **C VIDEO1, 2, 3 (BNC, RCA, S-Video)**

Connect VCR's, DVD's or Video Cameras, etc. here. VIDEO1 can be used for Input or Output

### **D AUDIO1, AUDIO2, AUDIO3**

These are audio input terminals.

The input is selectable. Set which video image to allot them from the SOUND menu screen.

### **E COMPONENT1**

Connect DVD's, High Definition or Laser Discs, etc. here.

### **F PC2/COMPONENT2**

PC2: You can connect an analog RGB signal and the synchronization signal.

COMPONENT2: You can connect DVDs, High Definition sources, Laser Discs, etc. here.

This input can be set for use with an RGB or component source

### **G PC1 (mini D-Sub 15pin)**

Connect an analog RGB signal from a computer, etc. here. This input can be used for Input or Output

### **H PC3 (DVI 24pin)**

Connect a digital signal (TMDS) from a source with a DVI output.

### **I RS-232C**

**Never connect any component to this connector without first consulting your Pioneer installation technician.**

This connector is used for plasma display setup adjustments.

### **J REMOTE IN**

Connect the remote cable\* to the remote control's remote jack to obtain wired remote control.

### **K REMOTE OUT**

Connect the remote cable\* to the REMOTE IN jack of the other display monitor to obtain wired remote control.

\* The 1/8 Stereo Mini cable must be purchased separately.

## ■ PDP-42MVE1/LDFK & /TXGB

### Front View

- ① **Power (  )**  
Turns the monitor's power on and off.

When the power is on ..... Lights green.  
When the power is in the standby mode ... Lights red.
- ④ **INPUT/EXIT**  
Switches the input.  
The available inputs depend on the setting of "BNC INPUT", "RGB SELECT", "D-SUB SELECT" and "DVI SET-UP".  
Functions as the EXIT buttons in the On-Screen Display (OSD) mode.
- ⑤ **LEFT/- and RIGHT/+**  
Functions as the CURSOR (  /  ) buttons in the On-Screen Display (OSD) mode.
- ⑥ **VOLUME  and **  
Adjusts the volume. Functions as the CURSOR (  /  ) buttons in the On-Screen Display (OSD) mode.
- ⑦ **MENU/SET**  
Sets the On-Screen Display (OSD) mode and displays the main menu.

### WARNING

The Power on/off switch does not disconnect the plasma display completely from the supply mains.

**Note:** This plasma monitor has the capacity to display images when connected to European DVD players with a SCART output signal, which is RGB with composite sync.

Your dealer can supply a special SCART cable, which will enable you to use the RGB with composite sync signal.

To obtain the special cable as well as for further information, please contact your dealer.

Please refer to page 19 for selection of the correct mode in the on-screen display.

## Rear View/Terminal Board

### A AC IN

Connect the included power cord here.

### B EXT SPEAKER L and R

Connect speakers (optional) here. Maintain the correct polarity. Connect the  $\oplus$  (positive) speaker wire to the  $\oplus$  EXT SPEAKER terminal and the  $\ominus$  (negative) speaker wire to the  $\ominus$  EXT SPEAKER terminal on both LEFT and RIGHT channels. Please refer to your speaker's owner's manual.

### C VIDEO1, 2, 3 (BNC, RCA, S-Video)

Connect VCR's, DVD's or Video Cameras, etc. here. VIDEO1 can be used for Input or Output (see page 24).

### D AUDIO1, AUDIO2, AUDIO3

These are audio input terminals. The input is selectable. Set which video image to allot them from the SOUND menu screen.

### E COMPONENT1

Connect DVD's, High Definition or Laser Discs, etc. here.

### F PC2/COMPONENT2

PC2: You can connect an analog RGB signal and the synchronization signal.  
COMPONENT2: You can connect DVDs, High Definition sources, Laser Discs, etc. here.  
This input can be set for use with an RGB or component source (see page 17).

### G PC1 (mini D-Sub 15pin)

Connect an analog RGB signal from a computer, etc. here. This input can be used for Input or Output (see page 24).

### H PC3 (DVI 24pin)

Connect a digital signal (TMDS) from a source with a DVI output.

### I RS-232C

**Never connect any component to this connector without first consulting your Pioneer installation technician.**

This connector is used for plasma display setup adjustments.

### J REMOTE IN

Connect the remote cable\* to the remote control's remote jack to obtain wired remote control.

### K REMOTE OUT

Connect the remote cable\* to the REMOTE IN jack of the other display monitor to obtain wired remote control.

#### Information

- For Y/CB/Cr, connect to the COMPONENT1 or PC2/COMPONENT2 terminals.
- For SCART, this unit provides three ways to connect:
  - SCART1: Connect R/G/B and composite sync. to the PC2/COMPONENT2 terminals. (R, G, B and HD connector)
  - SCART2: Connect R/G/B to the COMPONENT2 terminals and composite sync. to the VIDEO1 terminal.
  - SCART3: Connect R/G/B and composite sync. to the PC1 terminal.

\* The 1/8 Stereo Mini cable must be purchased separately.

## Remote Control

### ① POWER ON/STANDBY

Switches the power on/standby.  
(This does not operate when STANDBY/ON indicator of the main unit is off.)

### ② RGB/PC

Press this button to select RGB/PC as the source.  
RGB/PC can also be selected using the INPUT/EXIT button on the monitor.

### ③ COMPONENT

Press this button to select COMPONENT as the source.  
COMPONENT can also be selected using the INPUT/EXIT button on the monitor.

### ④ VIDEO

Press this button to select VIDEO as the source.

→ VIDEO1 → VIDEO2 → VIDEO3

VIDEO can also be selected using the INPUT/EXIT button on the monitor.

### ⑤ MENU/SET

Press this button to access the OSD controls.  
Press this button during the display of the main menu to go to the sub menu.

### ⑥ CURSOR (▲ / ▼ / ◀ / ▶)

Use these buttons to select items or settings and to adjust settings.

### ⑦ EXIT

Press this button to exit the OSD controls in the main menu. Press this button during the display of the sub menu to return to the previous menu.

### ⑧ POINT ZOOM

Press this button to display the pointer.

### ⑨ ZOOM (+ / -)

Enlarges or reduces the image.

### ⑩ VOLUME (+ / -)

Adjusts the sound volume.

### ⑪ MUTING

Mutes the sound.

### ⑫ SCREEN SIZE

Automatically detects the signal and sets the aspect ratio.  
SCREEN SIZE button is not active for all signals.

### ⑬ DISPLAY

Displays the source settings on the screen.

### ⑭ OFF TIMER

Activates the off timer for the unit.

### ⑮ AUTO SET UP

Press this button to adjust PHASE, CLOCK, Position, and Contrast automatically, or to switch the screen size to ZOOM mode automatically with the superimposed caption displayed fully only when the picture contains dark areas above and below the picture.

### ⑯ ID NO. SET

Set the ID number in the remote control. The remote control can then be used only for a display with the same ID number. When several displays are used together they can be controlled individually.

### ⑰ CLEAR

Clears the number set by the ID NO. SET button.

### ⑱ Remote control signal transmitter

Transmits the remote control signals.

### ⑲ Remote Jack

Insert the plug of the remote cable (The 1/8 Stereo Mini cable) here when using the supplied remote control in the wired condition.

# PARTS LIST

- NOTES: ● Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.  
 ● The  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.  
 ● Screws adjacent to  mark on product are used for disassembly.  
 ● For the applying amount of lubricants or glue, follow the instructions in this manual.  
 (In the case of no amount instructions, apply as you think it appropriate.)  
 ● Reference Nos. indicate the pages and Nos. in the service manual for the base model.

## ■ PDP-424MV and PDP-42MVE1/LDFK, /TXGB

# HOW TO DIAGNOSE THE PDP MODULE

## (PDP-NP42B3MF01AB)

1. List of tools required for repair
2. Points of failure diagnosis for a Board Assy (PKG)
  - \* Power source please do measurement of each ohmic value by status of OFF.
3. Replacement method of a Board Assy (PKG)  
and notes on replacement
4. Adjustments after replacement of parts in the module
5. Operation check

---

### 1. List of tools required for repair

- a) Phillips screwdriver: For detaching/reattaching PKGs
- b) Antistatic wrist strap:
  - To be used when electronic components, such as PKGs, are to be handled
- c) Signal generator (PC, etc.): For voltage adjustment and display check
- d) Power: For voltage adjustment and display check
- f) Tester: For cable check, voltage adjustment, etc.
- g) Cushion: To be used when the PKGs are to be replaced

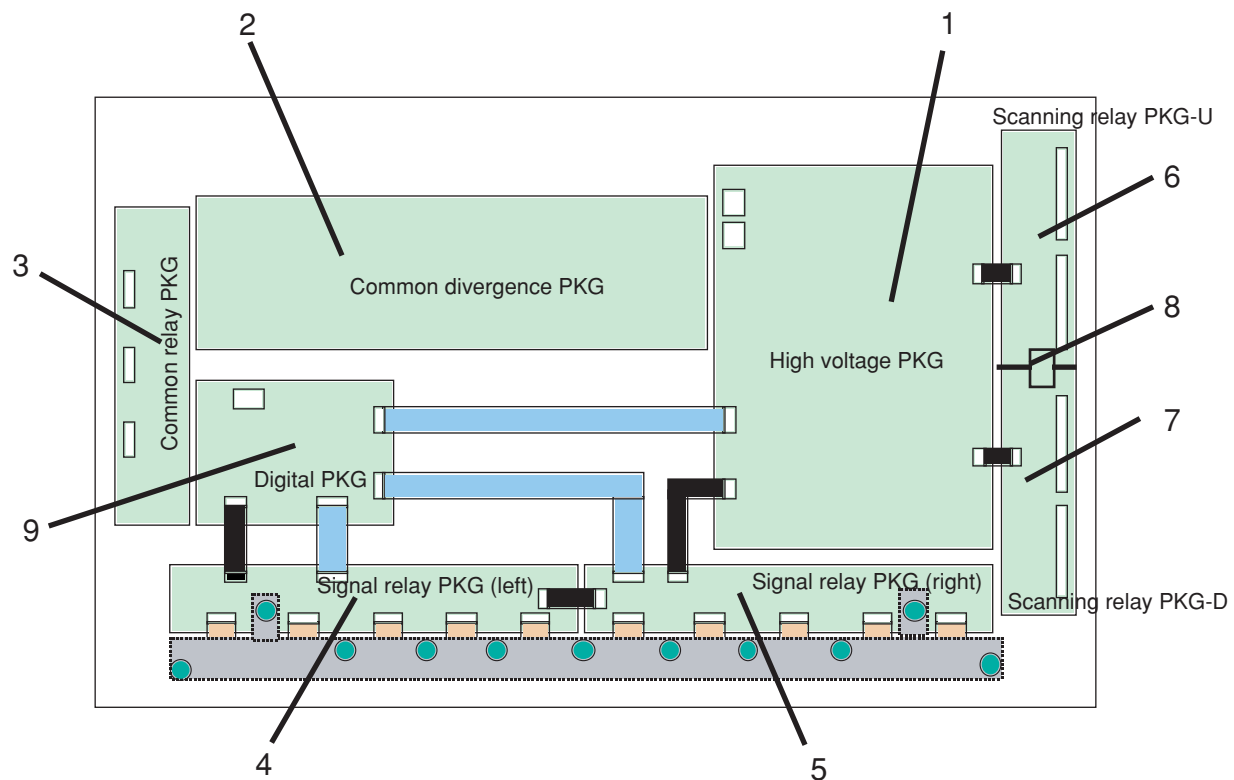

Note: Be sure to wear a wrist strap when you detach/reattach PKGs (Board Assy) to protect electronic components from being damaged by electrostatic charges.

# PARTS LIST

PDP-NP42B3MF01AB

SYMBOL	PART NAME		PART NO	QTY	NOTE
	TYPE NAME	VERSION			
1	PKG42B3G1	01D	9S899523	1	High voltage PKG
2	PKG42B3J4	01A	9S899627	1	Common divergence PKG
3	PKG42B3J3	01A	9S899282	1	Common relay PKG
4	PKG42B3J1	02B	9S899524	1	Signal relay PKG (left)
5	PKG42B3J2	02B	9S899525	1	Signal relay PKG (right)
6	PKG42B3E1	01C	9S899351	1	Scanning relay PKG-U
	PKG42B3E1	01D	9S899528	1	
7	PKG42B3E2	01C	9S899355	1	Scanning relay PKG-D
	PKG42B3E2	01D	9S899531	1	
8	PKG42B3E3	Version nothing	9S899443	1	Scanning relay PKG-C
9	PKG42B3C2	03J-06	9S899847	1	Digital PKG

- Notes:
- The version of a board assy (PKG) is indicated on the label on the board assy.
  - When replacing the scanning relay board assys (PKG-C), make sure that the PKG-U (PKG42B3E1) and PKG-D (PKG42B3E2) of the same version are used, to ensure correct scanning timing.

Version label of the board assy (PKG)

- Part name
- Serial number
- HW version • SW version

Digital PKG

Other PKG

## Compatible table of the board version

Part Name of PKG	Target Version	Compatible Version	Conditions	Remarks
High voltage PKG	0 1 A	0 1 D		
P K G 4 2 B 3 G 1	0 1 B			
	0 1 C			
Common divergence PKG	0 1 A	0 1 A		
P K G 4 2 B 3 J 4				
Common relay PKG	0 1 A	0 1 A		
P K G 4 2 B 3 J 3				
Signal relay PKG (left)	0 2 A	0 2 B		
P K G 4 2 B 3 J 1	0 2 B			
Signal relay PKG (right)	0 2 A	0 2 B		
P K G 4 2 B 3 J 2	0 2 B			
Scanning relay PKG-U P K G 4 2 B 3 E 1	0 1 C	0 1 C		
	0 1 D	0 1 D		
Scanning relay PKG-D P K G 4 2 B 3 E 2	0 1 C	0 1 C		
	0 1 D	0 1 D		
Digital PKG P K G 4 2 B 3 C 2	0 1 A—0 6	0 3 J—0 6		
	0 1 B—0 6			
	0 1 D—0 6			
	0 1 E—0 6			
	0 1 F—0 6			
	0 2 E—0 6			
	0 2 F—0 6			
	0 2 G—0 6			
	0 2 J—0 6			
	0 3 J—0 6			

Note: By referring to the table on compatible versions of the board assys, make sure that board assys of compatible versions are used.

## 2. Points of failure diagnosis for a Board Assy (PKG)

The fuses and/or fusible resistors shown in the photos below may be blown by electric surges caused by a failure. In such a case, replace the corresponding PKG.

### Failure diagnosis of the Scanning PKG

### Failure diagnosis of the Power HIC on the Scanning PKG

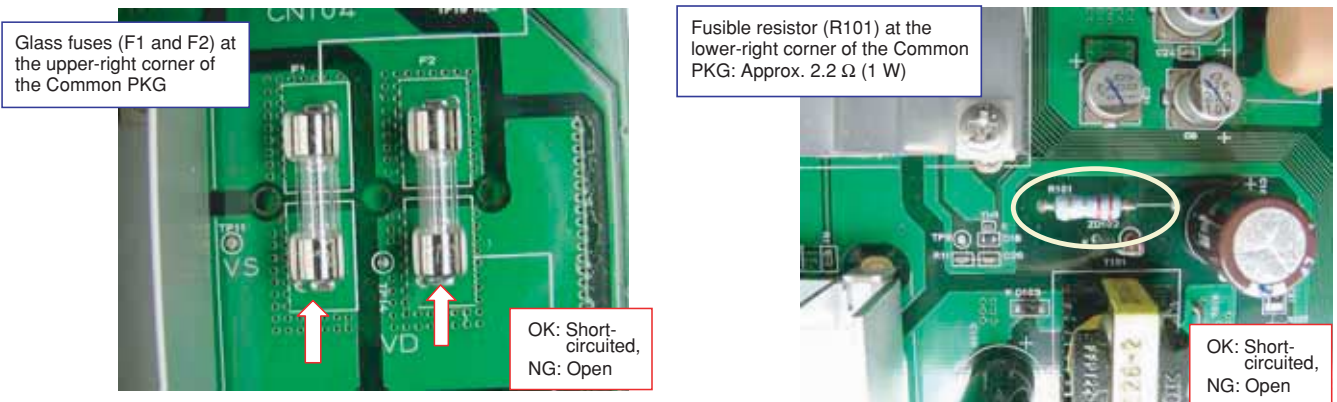

## Failure diagnosis of the Scanning IC

Check with a tester the resistance value between any pins indicated as NEGA and POSI of the connector in the photos below. If a positive and a negative pin of the connector on the Scanning Relay PKGs are short-circuited and remains short-circuited even after the connectors on the Scanning PKG and Scanning Relay PKG are disconnected, the Scanning IC on the Scanning Relay PKG is in failure.

## Failure diagnosis of the Common PKG

## Failure diagnosis of the Power HIC on the Common PKG

## Failure diagnosis of the Data HIC

Failure symptom: The image in any block of the screen is not displayed.

Check with a tester between Pin 5 or 6 (Vd line of Data IC) and ground of each Signal Relay PKG.

## Failure diagnosis of the Digital PKG

Chip fuse (FU701) at the upper-right corner of the digital PKG

OK: Short-circuited,  
NG: Open

### 3. Replacement method for a Board Assy (PKG) and notes on replacement

#### Preparation

Place a cushion on the workbench and set the module to be repaired on it.

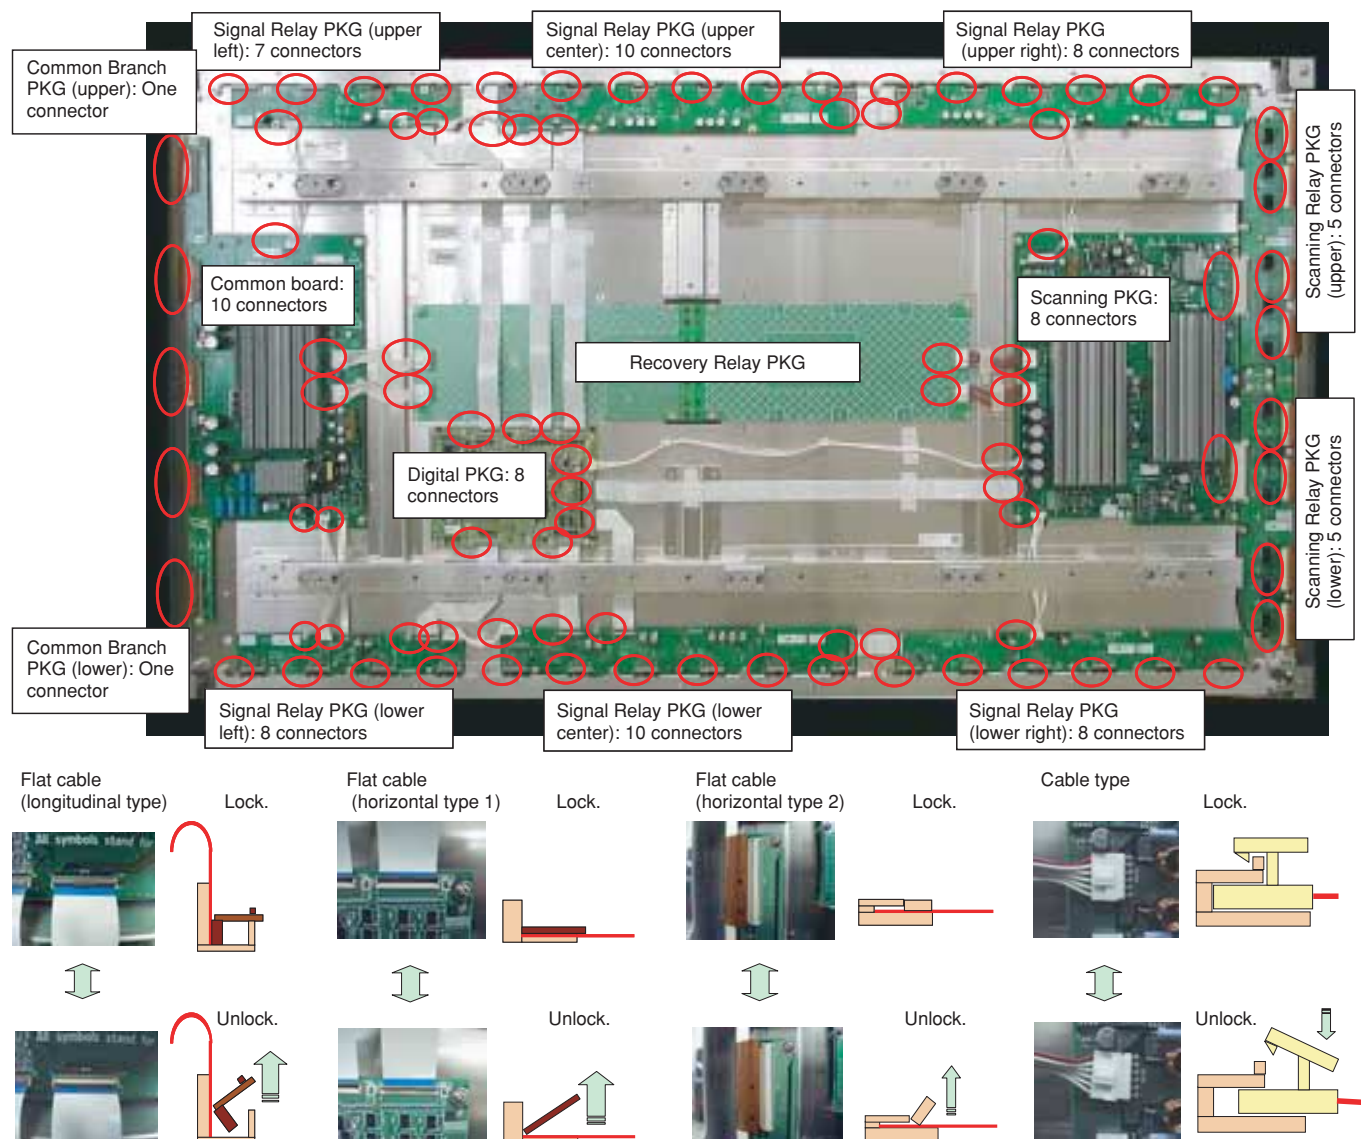

Note: With the glass surface facing downward, be sure that the entire glass surface is against the cushion.

#### Disconnection of connectors and cables

Disconnect all the connectors on the PKG to be repaired.

(When a Signal Relay PKG is to be removed, remove the heat sink beforehand.)

## How to remove/reattach the Board Assy (PKGs)

- Notes:
- Be sure not to drop a screwdriver or screw on a PKG or a cable.
  - When removing/reattaching a screw, be sure not to leave any tiny metal shavings, because they may cause a failure.
  - Before removing Signal Relay PKGs, remove the heat sink.
  - Be sure not to apply any stress to a PKG, connector, or cable when reattaching them.
  - Reattach Signal Relay PKGs before reattaching the heat sink.

## Confirmation of connector connection

Check whether or not the connectors indicated by circles are correctly connected.

## Confirmation of connector connection and locking statuses

○: OK ×: NG

Between the Signal Relay PKG (photo) and Digital PKG

Between the Signal Relay PKG and Digital PKG (photo)

Between the panel and Common PKG (photo)

Between the Scanning PKG (photo) and Recovery Relay PKG

Between the Signal Relay PKG and Scanning PKG (photo)

Between the Scanning Relay PKG (photo) and panel

Between the Scanning PKG (photo) and Signal Relay PKG (photo)

## 4. Adjustments after replacement of parts in the module

After the module has been reassembled, adjust the panel-drive voltages as indicated below:  
Check Vbw, Vsw, and Vp voltages (values specific for each panel) indicated on the drive-voltage label.

Drive-voltage label	Vbw	Vsw	Vp
(s185.0 / d65.0)	115.2	209.9	199.8
*****			
311200062			

Example  
Vbw : 115.2V  
Vsw : 209.9V  
Vp : 199.8V

### Vsw adjustment inside the Common PKG

Points to measure: Voltage between TP10 and GND (chassis GND) on the Common PKG  
Adjustment method: Adjust VR101 so that the Vsw value of TP10 becomes in the range of  $\pm 0.5$  V of the Vsw value indicated on the drive-voltage label.

### Vp adjustment inside the Scanning PKG

Points to measure: Voltage between TP32 and GND (chassis GND) on the Scanning PKG

Adjustment method: Adjust VR1 so that the Vp value of TP32 becomes in the range of  $\pm 1.5$  V of the Vp value indicated on the drive-voltage label.

### Vbw adjustment inside the Scanning PKG

Points to measure: Voltage between TP34 and GND (chassis GND) on the Scanning PKG

Adjustment method: Adjust VR2 so that the Vbw value of TP34 becomes in the range of  $\pm 0.5$  V of the Vbw value indicated on the drive-voltage label.

## 5. Operation check

After replacing the module or parts inside the module, perform aging for 30 minutes or more while displaying a fully white screen.

After that, check the screen by displaying a fully red, fully green, and fully blue screen, color bars, and gray scale.

Note: If any flashing or luminescent spots are recognized during display check after a long period of storage of the module, perform aging with a fully white screen displayed for another hour or so.

## Adjustment method in part replacement of the PDP module

After assembling the unit, perform the panel-drive voltage adjustment in the following order.

1. Check each voltage value (Vbw, Vsw, Vp and -Vw) in a drive voltage label (panel eigenvalue).

Drive voltage label Vbw/Vsw/Vp/-Vw

( s170.0/d65.0)  
115.0/209.5/199.8/45  
\*\*\*\*\*  
31120839

Example

Vbw = 115.0V  
Vsw = 209.5V  
Vp = 199.8V  
-VW = -45V

### 2. -Vw adjustment

Measuring point: The voltage between test point Vw on the high voltage PKG and GND (chassis GND)

Adjustment: Adjust VR4 so that the voltage of Vw becomes Vw value of drive voltage label  $\pm 0.5V$ .

### 3. Vbw adjustment

Note: Perform this adjustment after -Vw adjustment

Measuring point: The voltage between test point Vbw on the high voltage PKG and test point Vw

Adjustment: Adjust VR3 so that the voltage of Vbw becomes Vbw value of drive voltage label  $\pm 0.5V$ .

#### 4. Vsw adjustment

Measuring point: The voltage between test point Vsw on the high voltage PKG and GND (chassis GND)

Adjustment: Adjust VR2 so that the voltage of Vsw becomes Vsw value of drive voltage label  $\pm 0.5V$ .

#### 5. Vp adjustment

Measuring point: The voltage between test point Vp on the high voltage PKG and GND (chassis GND)

Adjustment: Adjust VR1 so that the voltage of Vp becomes Vp value of drive voltage label  $\pm 0.5V$ .

#### 6 OPERATION CHECKS

After replacing the PDP module or a part of the PDP module, perform aging with a fully white screen for 30 minutes or more. Then check the screen by displaying fully red, green, and blue screens, color bars, and gray scales.

Note: If any irregularity in lighting of cells of the screen is observed upon inspection after extended storage of the PDP, perform aging for another 1 hour or so with a fully white screen.

# TROUBLESHOOTING

- Problems in the power supply, such as "Failure in Power ON" or "LED flashing or lighting (alarm display)"

→ 1. Go to Power failure (P8-2).

- Problems in the images, such as "No pictures available"

→ 2. Go to Image errors (P8-8).

- No video loop-out signal is generated.

→ The MAIN PWB is faulty.

- "Remote control not effective"

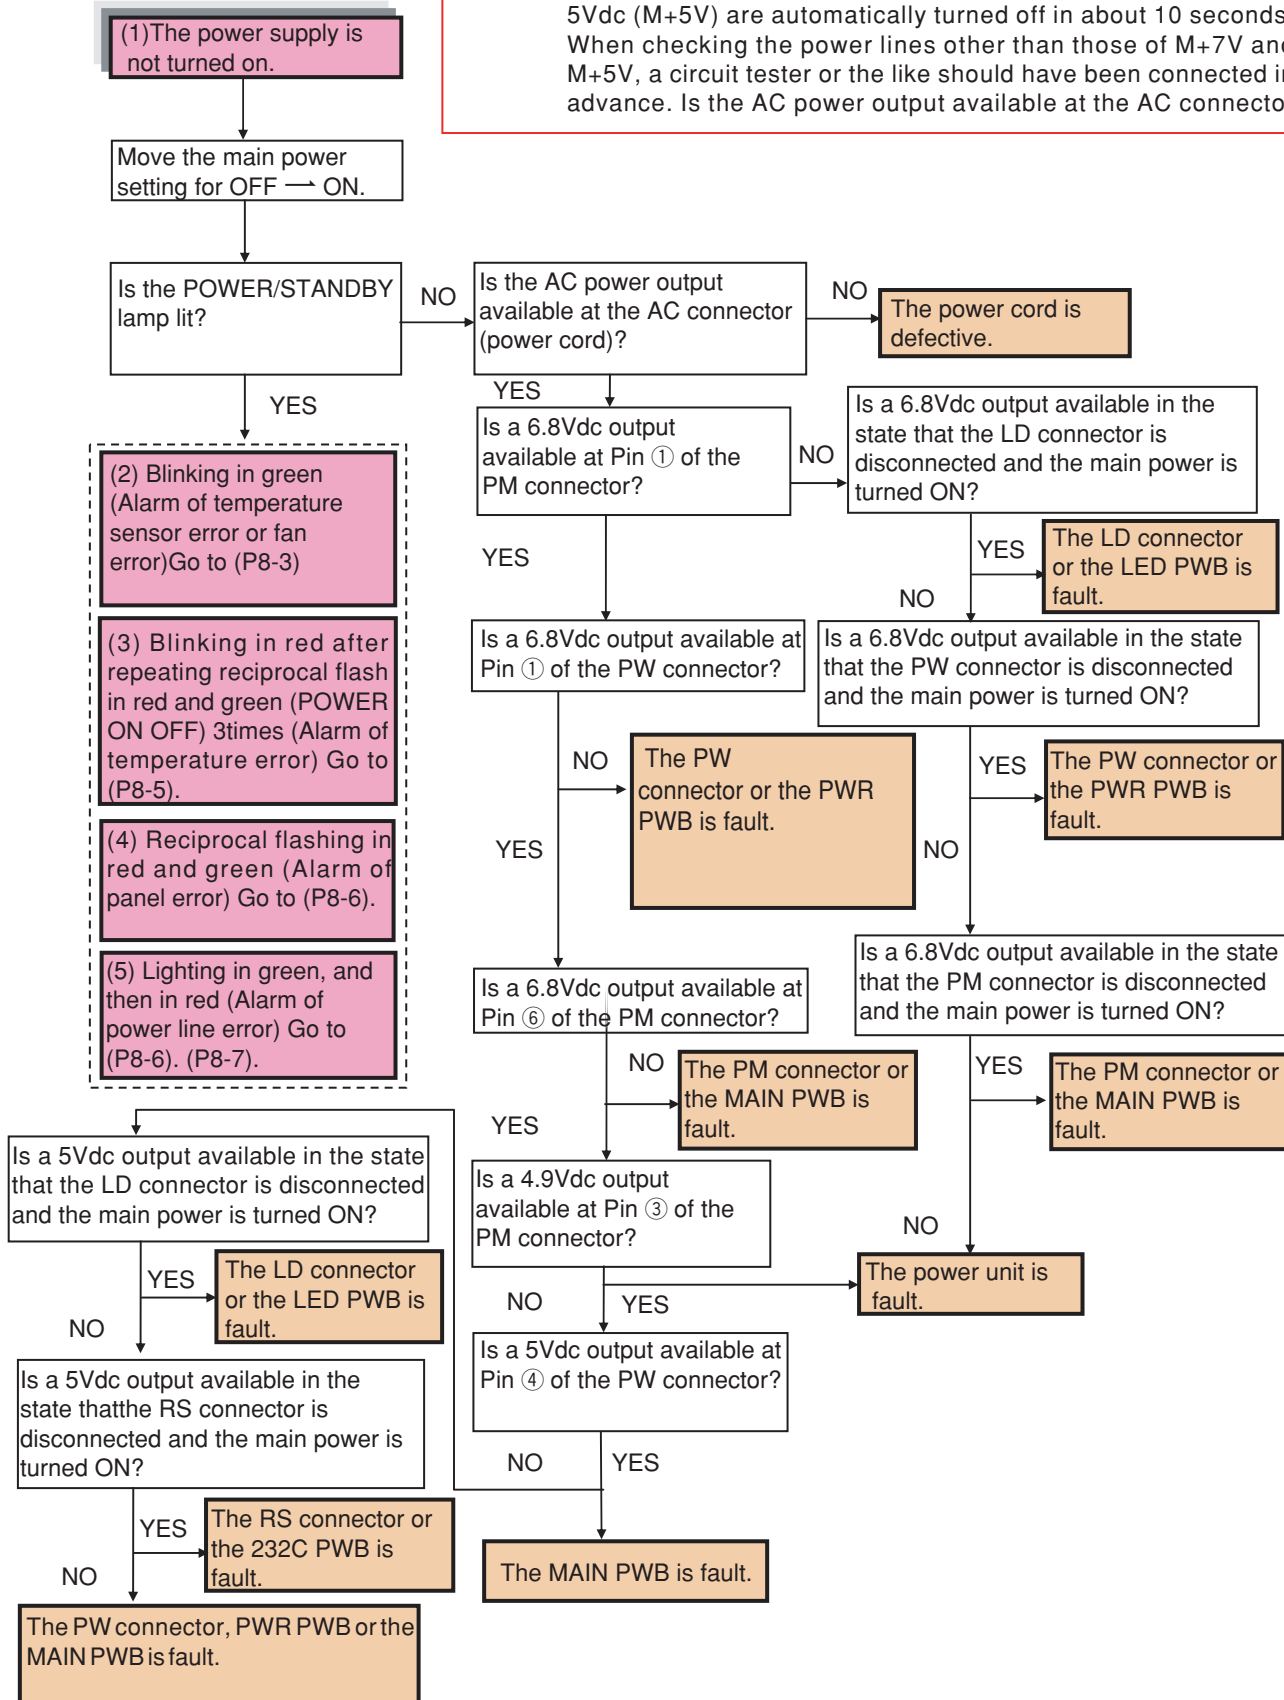

→ 3. Go to Audio errors (P8-16).

- "Remote control not effective"

→ 4. Go to Remote control not effective (P8-17).

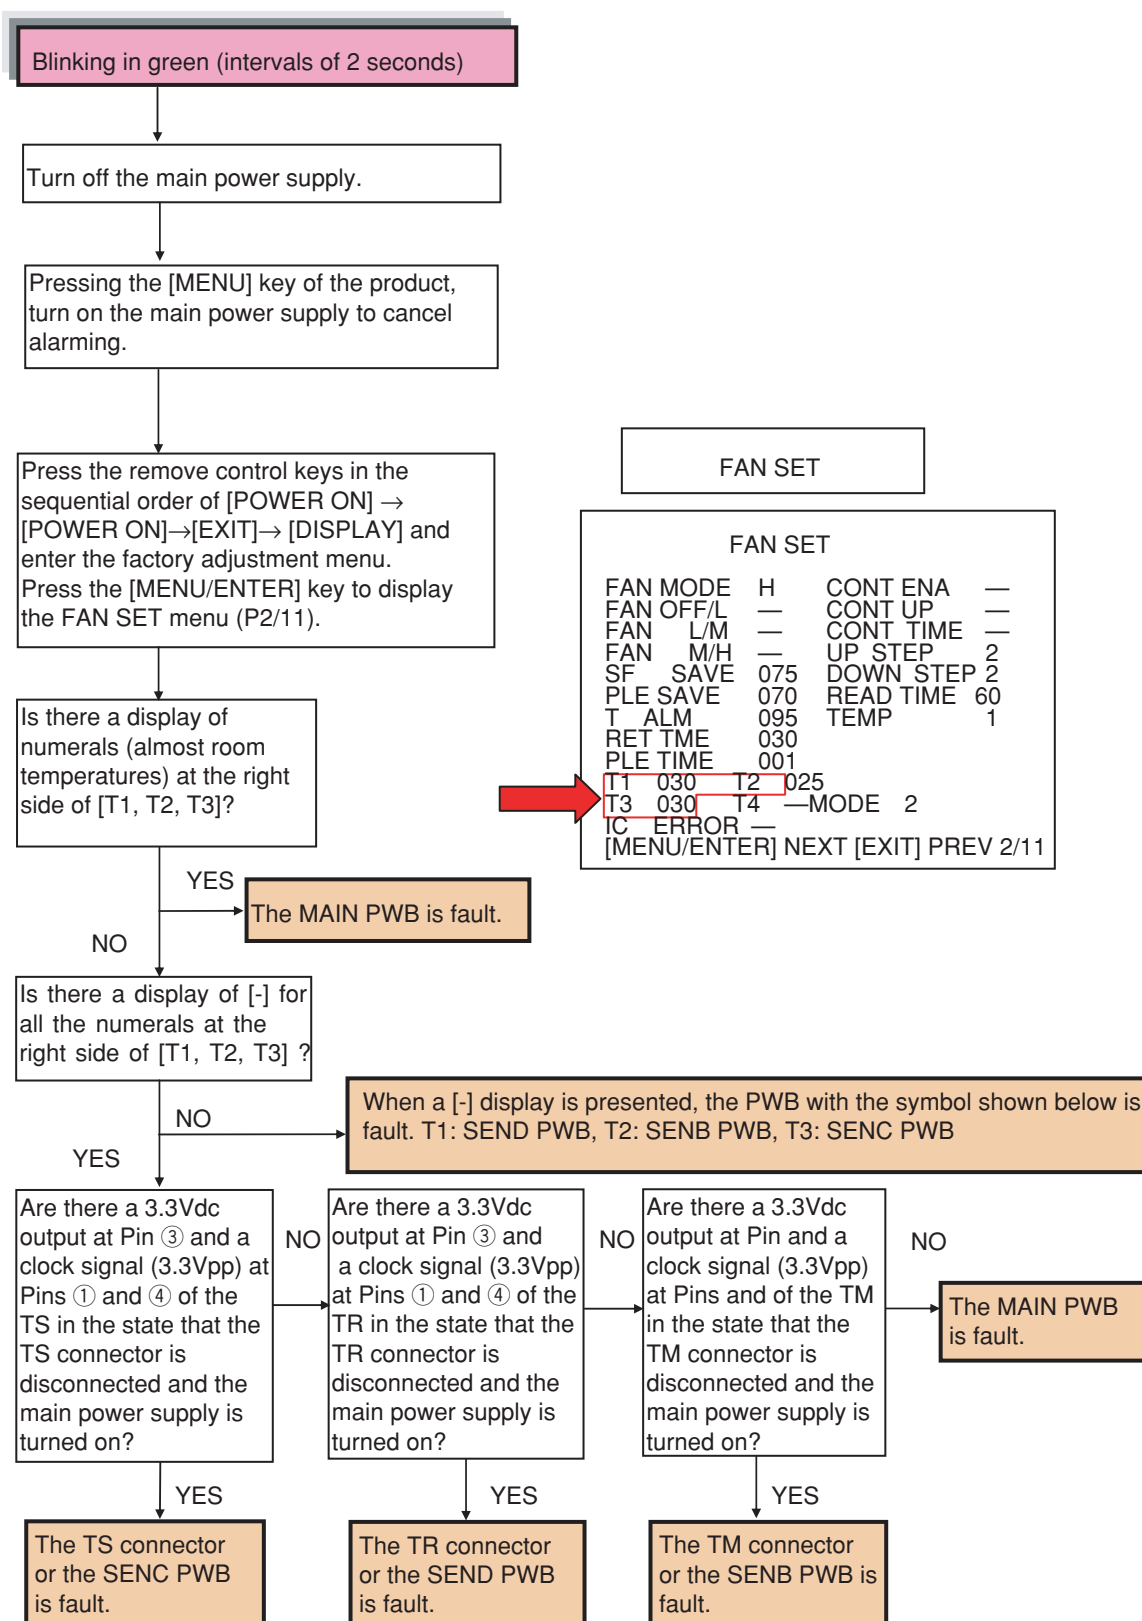

## (1) Power failure

(Caution) If any abnormality is sensed in such a manner that the LED flashes or lights, all the power lines other than those of 7Vdc (M+7V) and 5Vdc (M+5V) are automatically turned off in about 10 seconds. When checking the power lines other than those of M+7V and M+5V, a circuit tester or the like should have been connected in advance. Is the AC power output available at the AC connector

## (2) Blinking in green

Alarm of temperature sensor error

## ② Alarm of fan error

Blinking in green (intervals of 0.5 seconds)

Turn off the main power supply.

Pressing the [MENU] key of the product, turn on the main power supply to cancel alarming.

Is the fan running?

(Caution) When alarming is canceled, [FAN MODE] of FAN SET (P2/11) in the factory adjustment menu automatically moves from [ENA] to [H], thus causing the fan to run.

### FAN SET

FAN MODE ENA CONT ENA —

NO

YES

Is there a 3.3Vdc output at Pin ③ of the FA and FB, FC connectors?

YES

The fan is out of order on the side where a 3.3Vdc output is generated.

NO

The MAIN PWB is fault.

Is there a voltage output of 11.3Vdc for PX-42XM3/XR3, 11.2Vdc for PX-50XM4/XR4, and 9.3Vdc for PX-61XM3/XR3, respectively, at Pin 1 of the FA, FB, and FC connectors?

NO

YES

The FAN-A/FAN-B/FAN-C is fault.

(Caution) The FAN-C and FC connectors are used only for the 61XM3 Series.

Is there a voltage output of 11.3Vdc for PX-42XM3/XR3, 11.2Vdc for PX-50XM4/XR4, and 9.3Vdc for PX-61XM3/XR3, respectively, when the FA connector is disconnected and the mains power is turned ON?

YES

The FAN-A is fault.

NO

Is there a voltage output of 11.3Vdc for PX-42XM3/XR3, 11.2Vdc for PX-50XM4/XR4, and 9.3Vdc for PX-61XM3/XR3, respectively, when the FB connector is disconnected and the mains power is turned ON?

YES

The FAN-B is fault.

NO

Is there a voltage output of 11.3Vdc for PX-42XM3/XR3, 11.2Vdc for PX-50XM4/XR4, and 9.3Vdc for PX-61XM3/XR3, respectively, when the FC connector is disconnected and the mains power is turned ON?

YES

The FAN-C is fault.

NO

The MAIN PWB is fault.

(Caution) In the FAN MODE, [ENA] is automatically recovered when the main power is turned OFF→ON.

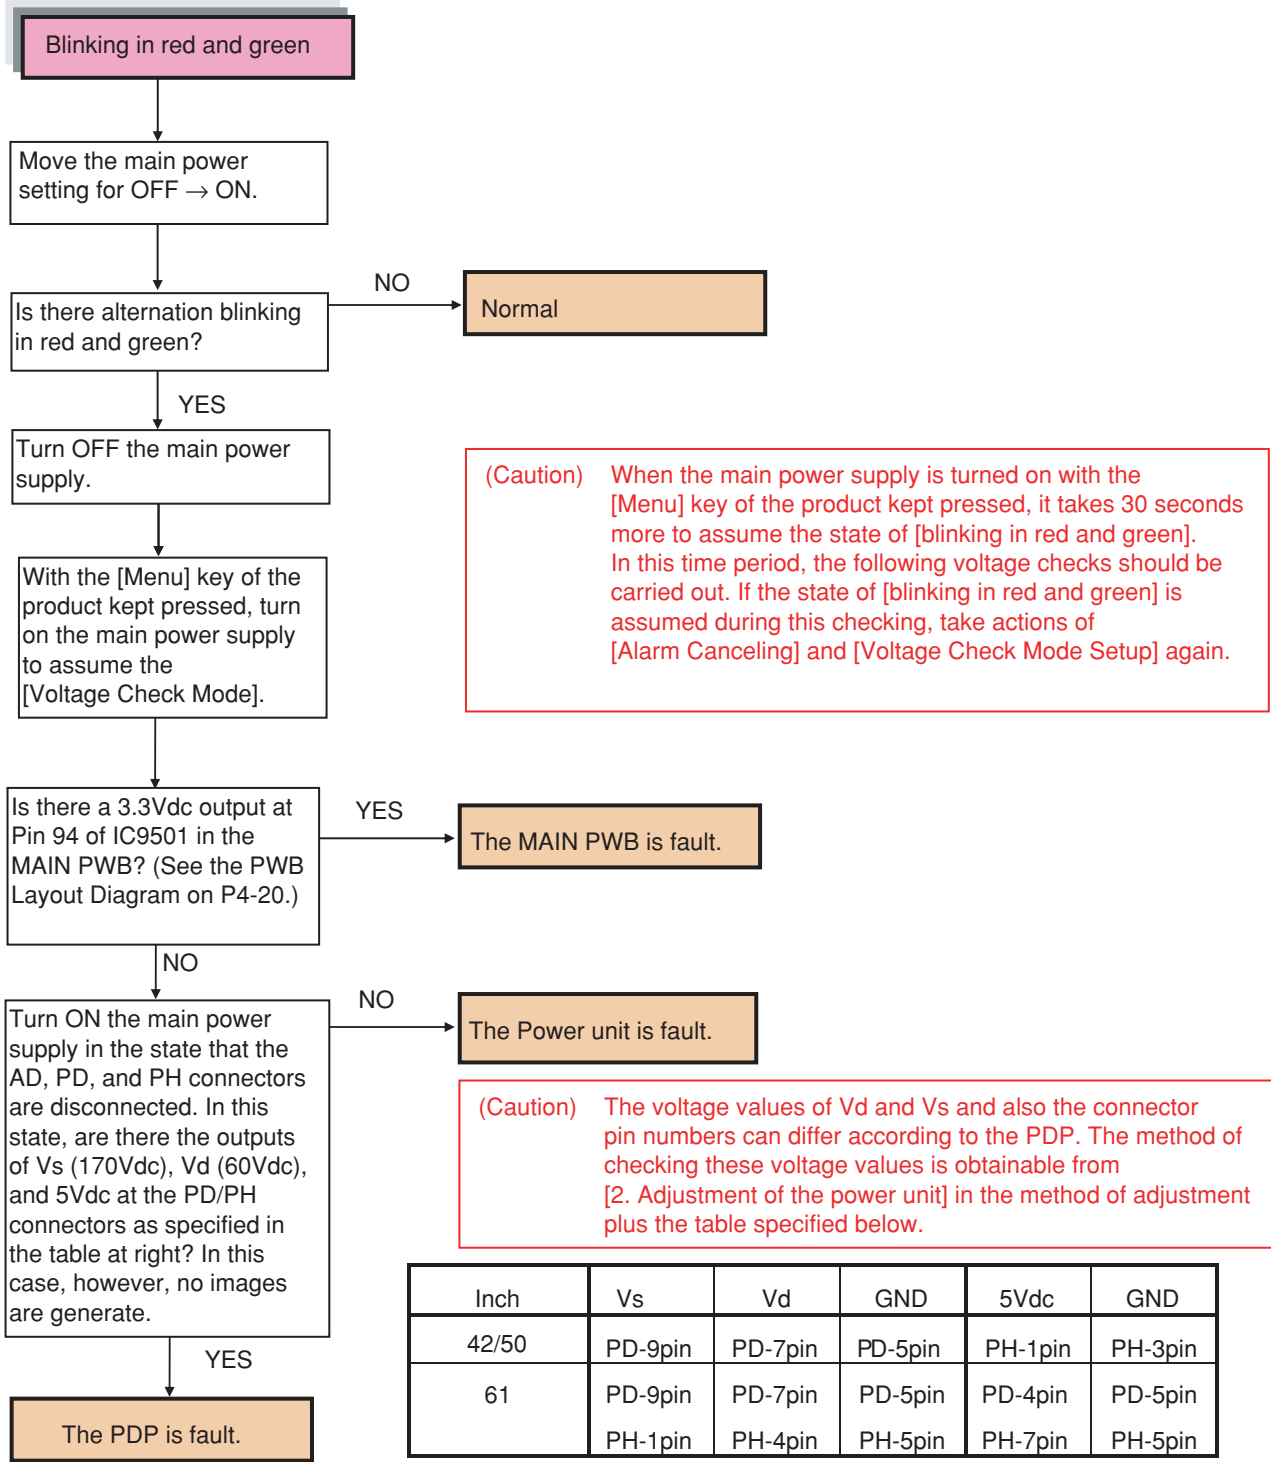

### **(3) Blinking in red (Alarm of temperature error)**

Since the internal temperature is too high in the product, the temperature protector has been actuated. In such a case, the following actions should be taken immediately:

1. Turn off the main power supply and pull out the power cord from the wall outlet.
2. Wait for about 60 minutes until the temperature in the main unit lowers.
3. Check whether the heat discharge port is covered with dust or the like. If yes, remove the clogging substance.
4. If the unit is used where the ambient temperature is high, it should be moved to an adequate place (air temperature ranging from 5°C to 35°C).

#### (4) Alternation blinking in red and green (Alarm of PDP error)

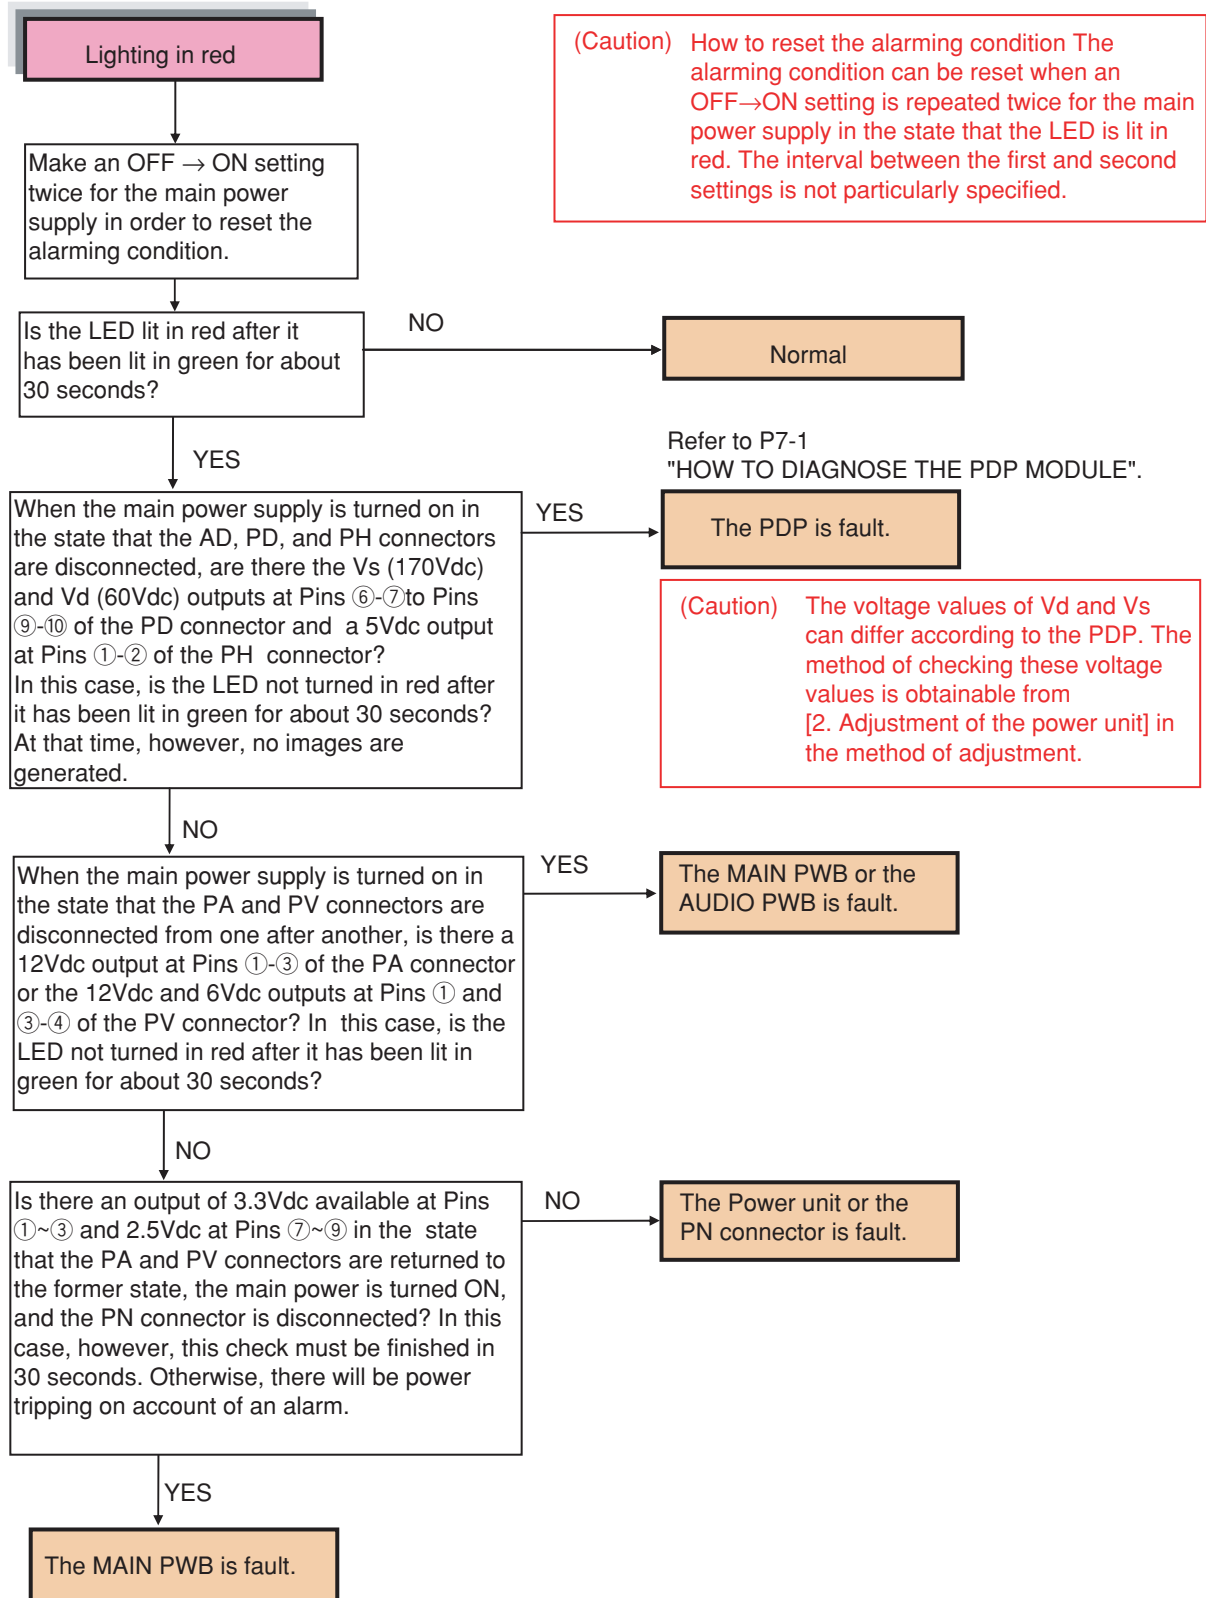

(Caution) How to reset the alarming condition Pressing the [Input Select] key of the product, turn on the main power supply of the main unit. In this state, keep pressing the [Input Select] key for more than 2 seconds until alarming is canceled. Make confirmation by the method specified below.

( Refer to P7-1 "HOW TO DIAGNOSE THE PDP MODULE".)

## (5) Lighting in green, and then in red (Alarm of power voltage error)

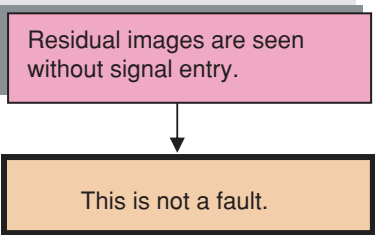

Unlike [lighting in red] in the STANDBY mode, [lighting in green] continues for about 30 seconds without any output of images and audio signals. Since then, the mode turns into [lighting in red].

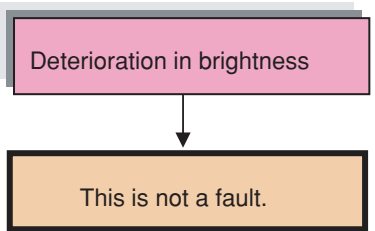

2. Image errors

(Caution) Typical abnormal images are shown below. All errors do not always fall on these error samples.

(1) Image burn and deterioration in brightness

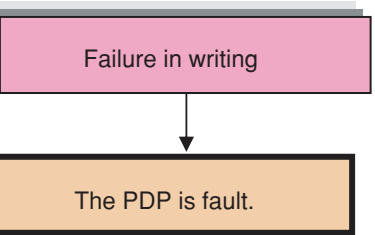

No signal

All-whitesignal

(2) Failure in writing

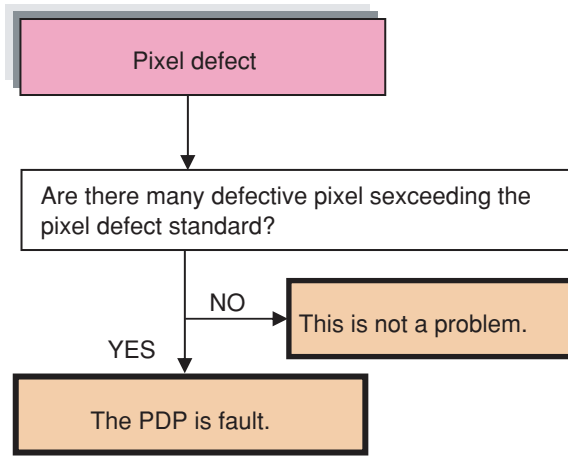

All-whitesignal

Refer to P7-1 "HOW TO DIAGNOSE THE PDP MODULE".)

All-w

### (3) Pixel defect

(To the separate PDP service manual)

(Fig. 1) All-Black Signal

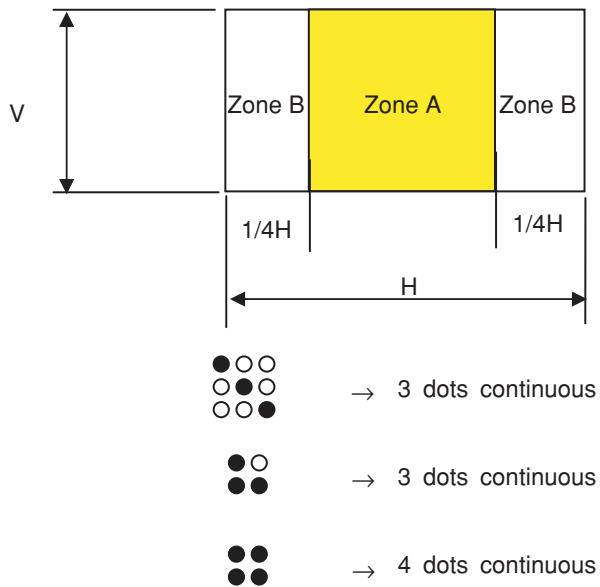

(Fig. 2) All-White Signal

[Pixel defect standard for reference]

	Displayed image	Pixel defect standard	
		Non-continuous	Continuous
Bright defect	Black all over the screen (Fig. 1)	Zone A:□dots or less in all for each color Zone B:□dots or less in all for each color	Continuous □dots or less
	Red level 100% over the screen	Zone A:□dots or less in all for each color	Defective when □dots or less are continuously horizontal and seen white.
	Green level 100% over the screen	Zone B:□dots or less in all for each color	
	Blue level 100% over the screen	Each zone:□dots or less for each uni-color	
Dark defect	Red level 100% over the screen	Zone A:□dots or less in all for each color Zone B:□dots or less in all for each color	Zone A:□dots or less vertically continuous
	Green level 100% over the screen		Zone B:□dots or less continuous
	Blue level 100% over the screen		Except for the continuous portions, however, the distance between dark dots shall be □cm or more.
	White all over the screen (Fig. 2)	—	Zone A:□dots continuous in one portion or less (□dots for vertical continuity) Zone B:□dots or less continuous Except for the continuous portions, however, the distance between dark dots shall be □cm or more.

(Caution) In regard to the full information, refer to the PDP quality updating report (Japan) or the PDP quality report (other than Japan).

<For the 42XM3/XR3>

(Caution1) Zone A: Central part (the area surrounded by the right and left sides by  $1/4H$ ) with the area that is  $1/2$  of the whole Zone B: Area other than A above

(Caution2) The continuous dots appearing in the slantwise direction or in a cluster state shall be defined as follows:

<For the 42VM5/VP5>

(Caution1) Zone A: Central part (the area surrounded by the upper and lower sides, right and left sides by  $1/4H$ ) with the area that is  $1/2$  of the whole Zone B: Area other than A above

(Caution2) The continuous dots appearing in the slantwise direction or in a cluster state shall be defined as follows:

#### (4) Wrong lighting

(Refer to P7-1 "HOW TO DIAGNOSE THE PDP MODULE".)

All-black signal

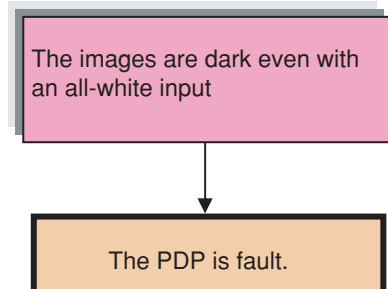

Dot errors change with no continuity.

All-black signal

#### (5) Dark images [Other than the deterioration in brightness as per (1) above]

(Refer to P7-1 "HOW TO DIAGNOSE THE PDP MODULE".)

All-white signal

All-white signal

All-white signal

**(8) No pictures** [(Caution) The voltage outputs of  $V_s = 170V$  and  $V_d = 64V$ ,  $5V_{dc}$  are always generated, but the LED is not flashing or lighting for alarming. However, the voltage values can differ according to the MODULE.]

### 3. Audio errors

(Caution) In regard to the method of audio input setting, refer to the specifications and the instruction manual to confirm that all the setting is free from errors. Since then, troubleshooting can be carried out. It must be noted that the protector functions and no audio output is available if the opposing electrodes of the speaker output or the speaker output and the ground (GND) are short-circuited. In such a case, turn off the main power supply and make the connections correctly. The protector is reset when the main power supply is turned on after that

#### 4. Remote control not effective

(1) The wired remote control is not effective.

① When a single item is used

The wired remote control is not effective.

(Caution) The wired remote control is not effective if the setting of [PLE LINK], or [Repeat TIMER] is ON, or if the setting of [ID NUMBER] has been made. Therefore, such a setting should be turned off, without fail. Since then, troubleshooting can be carried out.

Is there a signal output specified below at Pin 7 of the RS connector?

3.3Vpp

YES

The RS connector or the MAIN PWB is fault.

NO

Is there a signal output specified below at Pin 3 of the M2003? (Refer to the PWB layout diagram on Page P4-21.)

5Vpp

NO

Is there a 3.3Vdc output at Pin 2 of the M2003? (Refer to the PWB layout diagram on Page P4-21.)

YES

The remote control or the remote control cable is fault.

NO

The RS232C PWB is fault.

NO

The RS connector or the MAIN PWB is fault.

When the RS connector is disconnected, is there a signal output specified below at the RS connector of the MAIN PWB?

Pin No.	Pin name	Voltage
1	M + 5V	5Vdc
5	M + 3.3V	3.3Vdc

YES

The 232C PWB is fault.

② When a daisy chain (including the video wall) is used

The wired remote control is not effective.

Are the 0Vdc and 5Vdc outputs respectively available at Pins 9 and 10 of the RS connector in the standard roduct of 232C PWB?

YES

Is there a clock signal output at Pin 3 of the M2004? (Refer to the PWB layout diagram on Page P8-19.)

YES

Check the products of second and thereafter according to "1 When a single item is used."

NO

The MAIN PWB is fault.

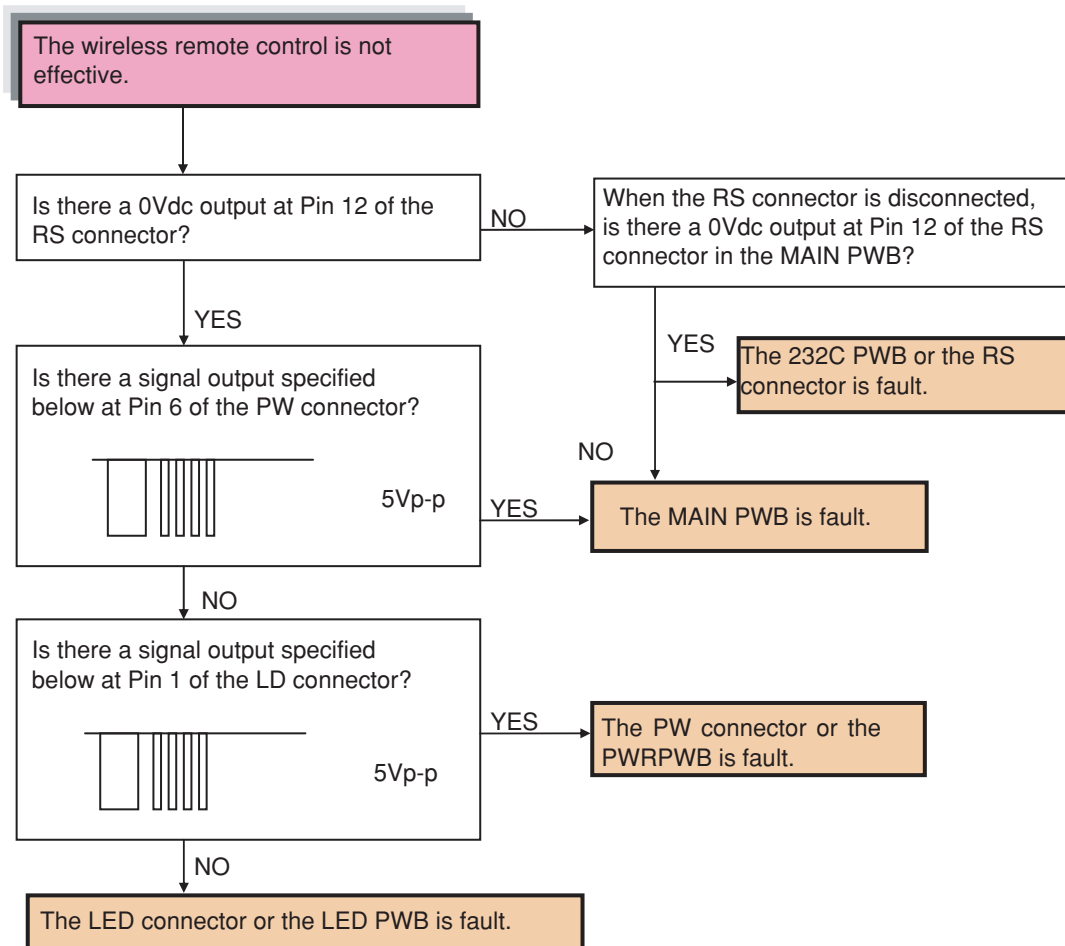

NO

The 232C PWB is fault.

## (2) The wireless remote control is not effective.

(Caution) Since the detection of "wired" or "wireless" is conducted for the remote control through the remote terminal, it is necessary to pull out the remote control cable from the remote terminal, without fail. Troubleshooting should be carried out after confirming that "IR REMOTE" is set at ON and that "ID NUMBER" is at ALL according to the user's menu.

# METHOD OF ADJUSTMENTS

## ■ Adjusting conditions

Adjustments should be carried out in the procedures of A to C specified below. However, any adjustments other than the items A to C below are not required.

- A. When the "PDP module (PDP-NP61C2MF01)" is replaced, adjustments should conform to the adjusting items of [1 and 2] specified below.
- B. When the "POWER UNIT" is replaced, adjustments should conform to the adjusting item of [2] specified below.
- C. When the "MAIN PWB" is replaced, adjustments should conform to the adjusting item of [3] specified below.

## ■ Adjusting items

### 1. Clearing of the usage time (Using the remote control)

- (1) Press the keys in the order of [POWER ON] → [POWER ON] → [EXIT] → [DISPLAY] in order to enter the factory adjustment menu.
- (2) Press the [MENU/ENTER] key to select the [USAGE TIME] menu (8/11). Then, the integrated time [34567 (hours)] (example) accumulated till the present time is displayed when the main power supply is turned on (except for the standby mode).

USAGE TIME

34567H

232C-ALARM RX 0  
TX 0

[MENU/ENTER] NEXT [EXIT] PREV 8/11

- (3) When the keys are pressed in the order of [MUTE] → POSITION/CONTROL ▲ ] → POSITION/CONTROL ▼ ] → [OFF TIMER], the display is cleared to [00000H]. At that time, the characters of [RESET] are displayed for about 5 seconds on the right side of time display.

USAGE TIME

00000H RESET

232C-ALARM RX 0  
TX 0

[MENU/ENTER] NEXT [EXIT] PREV 8/11

## 2. Adjustment of the power unit (Using a screwdriver for general-purpose adjustments)

### 2-1. Adjustment of the Vs voltage

- (1) Enter a color bar input by means of either video signal of VIDEO input, or DVD/HD input, or RGB input, and turn on the power switch of the main unit.
- (2) Turn the volume control (RV6) in the power unit and make adjustments until the voltages of CH2 and CH1 (D, GND) of the power unit attain the voltage values specified for the PDP (Vs value of the voltage regulation indicator label on below the figure)  $\pm 1V$ .

### 2-2. Adjustment of the Vd voltage

- (1) Enter a color bar input by means of either video signal of VIDEO input, or DVD/HD input, or RGB input, and turn on the power switch of the main unit.
- (2) Confirm that the voltages of CH4 and CH1 (D, GND) of the power unit are maintained at the voltage values specified for the PDP (Vd value of the voltage regulation indicator label on below the figure)  $\pm 1V$ .

Otherwise, turn the volume control (RV5) until the voltage attains the voltage values specified for the PDP (Vd value of the voltage regulation indicator label on below the figure)  $\pm 1V$ .

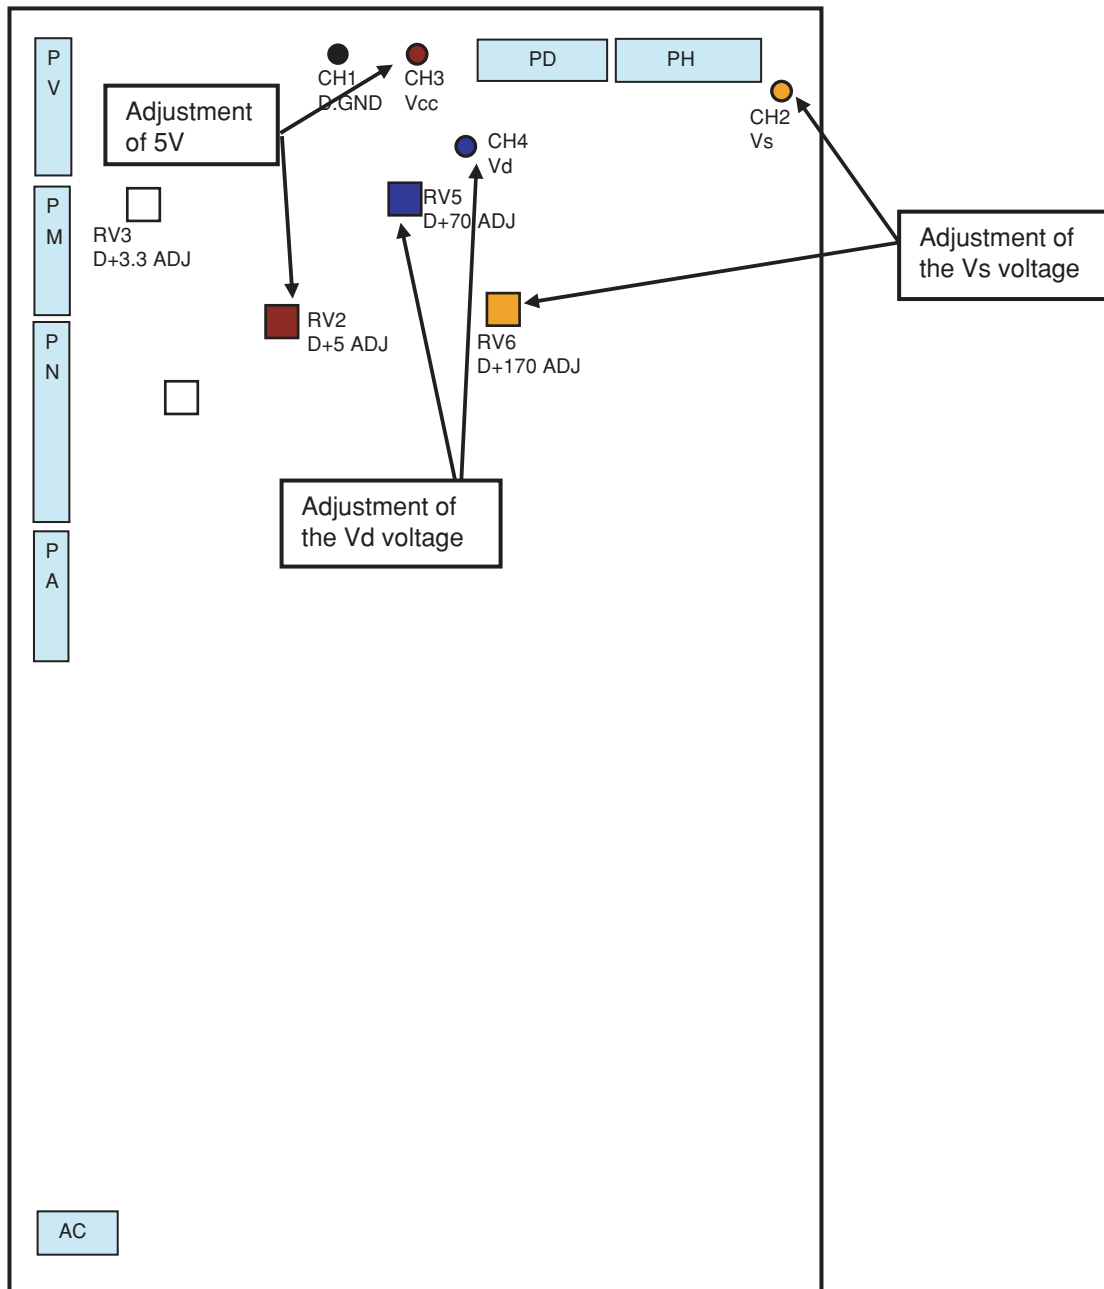

### 2-3. Adjustment of the +5V voltage

- (1) Display a color bar by means of either video signal of VIDEO input, or DVD/HD input, or RGB input.
- (2) Confirm that the voltages of CH3 and CH1 (D, GND) of the power unit are maintained at " $5.15 \pm 0.1V$ ". Otherwise, turn the volume control (RV2) until the voltage attains " $5.15 \pm 0.1V$ ".

(Caution) Rear-side view when the back cover is removed The label is concealed between the MAIN PWB and PDP. Check it by peeping through the space from above. The label position can be changed, without notice.

\* Top view of the power unit (Adjustment VR location)

### 3. Adjustments after the replacement of the MAIN PWB (Using the remote control)

#### 3-1. Product serial No. registration

- (1) Press the keys in the order of [POWER ON] → [POWER ON] → [EXIT] → [DISPLAY] in order to enter the factory adjustment menu.
- (2) Press the [MENU/ENTER] key to select the [MONITOR INFORMATION] No. menu. (Example : PDP-424MV)

MONITOR INFORMATION

# METHOD OF DISASSEMBLY

- (Caution)
1. Before disassembly, turn power off the main unit and pull out the power plug from the wall outlet.
  2. Use a screwdriver with a fitting size. Otherwise, the screw threads may be damaged.
  3. Reassembly can be carried out in the reverse order for disassembly. Refer to the disassembly procedures and forward reassembly in the reverse order.
  4. The order for taking out the parts (or components) is indicated by the foregoing numeral that is attached to the name of each part.
  5. The wire connector symbol is indicated by two digits of Marking□□. Read CN-□□when examining the table of parts.
  6. Class A or Class B in the text is applicable to the models specified below.
- CLASS A: PDP-424MV-F1 CLASS B: PDP-424MV, PDP-42MVE

M70 : CAUTION LABEL(E) 29L06891(424MV\_Only)

## 26. WIRING

### (1) CLASS A

PDP-424MV-FI (CLASS A) Wiring Diagram

(Caution) "Turns" in the illustration below denotes the number of cable turns to be wound around the ferrite core. (Example) 3 turns 3 turns of a cable wound around.

CCD board of PDP-424MV-FI : Try to push the bush rivet and the connector to check for the freedom from floating.

## [Measures to be taken against connector go- through in the CCD PWB]

A problem of connector go- through in the CCD PWB can be caused by inadequate workmanship such that a wiring material is pinched between the CCD PWB and the shield lid. To eliminate this problem, wiring work should be carried out as specified below, so that the PV and PM cables are never led to the CCD PWB.

[Model] For North America (Version A only)

[Wiring instructions] (Refer to the diagram below.)

- (1) Pass the PV and PM cables beneath the CCD PWB.
- (2) Fix the PV and PM cables by means of lead clampers.
- (3) Push the bush rivet and the connector to check for the freedom from floating.

[Lead clampers to be used]

LEAD CLAMPER( D5.2): 24C00091

# METHOD OF PACKAGING

## PDP-424MV and PDP-42MVE1

### A)BAG ASSY

## B) ACCESSORY BOX

## C) CARTON BOX, CUSHION

## D) JOINT

To be locked by inserting the joints (24CS0551) in 2 positions.  
Hang the P.P band based on the marking printed on the carton box edge line and fasten it with a stopper (P.P band) (24282431).

# CONNECTOR PIN EXPLANATION

## PDP-424MV/PDP-424MV-F/PDP-42MVE1 Series

(Caution) The operating voltages specified below are used in common irrespective of the presence of signals. In this case, however, part of the operating voltages (red characters) may change according to the signal conditions when the main power supply is turned on (POWER button ON).  
Status of LED lighting: ● for lighting in green, ◆ for unlighting, and ◆◆ for lighting in red.
